

Your King's Indian Defense course

A practical Black repertoire, from move one to the middlegame

Built for a club player who wants to study seriously. Learn a consistent answer to White's common systems, understand the pawn breaks, and practice the decisions that make the opening work.

WHAT IS INCLUDED

27 study booklets plus this material in one combined volume; 83 opening branches; ten illustrative middlegame laboratories; 72 exercises with explained answers; a 12-week plan; and PGN companions.

The starting family - White to move

A VISIBLE IMPROVEMENT

The SVG drawing scale is corrected so pieces are larger and centered accurately within the squares. Every board is oriented with Black at the bottom, with explicit coordinates.

BEGIN WITH UNDERSTANDING

Read 00 and 01, then follow the study order in 25. Use 24 for retrieval practice and 21-23 to connect the opening with plans.

THE MAIN RULE

Choose your plan from the actual center and king positions. A King's Indian setup does not mean that every game calls for ...f5 and a kingside pawn storm.

The bargain you are making

SPACE FOR COUNTERPLAY

In the King's Indian, White often builds the larger center while Black develops behind it. Your compensation is the ability to challenge that center with pieces and pawn breaks. The opening fails as a passive shell: you need a concrete route to activity.

THE BASIC POSITION

After 1.d4 Nf6 2.c4 g6 3.Nc3 Bg7 4.e4 d6, the g7 bishop influences d4 through f6 and e5 once those squares clear. Black usually castles and then chooses the central challenge according to White's system.

A REPERTOIRE, NOT EVERY POSSIBLE MOVE

This course selects a coherent answer to the common systems and important deviations. It does not enumerate every legal reply or settle all opening theory. The optional Fianchetto Panno is separated from the core ...Nbd7 repertoire so you can learn one answer first.

WHAT A GOOD OPENING RESULT MEANS

A playable position with active pieces, a defensible king and a plan you understand is a useful outcome. Black does not have to force an advantage. Some sound KID positions retain a modest White space advantage; learning to handle it is part of the opening.

Read the board from Black's side

ORIENTATION

Every board in this course has Black at the bottom. The bottom files run h through a from left to right. The bottom rank is 8. Pieces remain upright. Coordinates retain their normal names: g7 is always g7, regardless of your viewpoint.

MOVE NOTATION

N is knight, B bishop, R rook, Q queen and K king. A pawn move has no letter. x means capture; + is check; # is mate. O-O is kingside castling; O-O-O is queenside castling. Nbd7 identifies the knight from the b-file. A move such as 9...Nh5 is Black's ninth move.

TWO KINDS OF CONTINUATION

Each opening page identifies a selected study anchor. If extra moves were added to reach roughly move ten, they are marked as an illustrative engine-checked continuation. They show one plausible branch, not the only way the opponent can play.

USE A PHYSICAL OR DIGITAL BOARD

Play the sequence with both colors. Before each Black move, name White's threat and two candidate replies. If you cannot explain the chosen move, return to the diagram and the reason rather than memorizing another five moves.

A decision process for every Black move

1. FORCING MOVES

Check whether either king is in check. List captures, checks, direct threats, loose pieces and pawn forks. A threat to your c6 knight after d5 takes priority over finishing an ...a6/...Rb8 formation.

2. THE CENTER

Is the center locked, fluid, or open? Which pawn contact can change it immediately? Compare ...e5, ...c5 and sometimes ...d5 by calculation. A locked center can support a flank attack; an open center usually demands development and king safety first.

3. THE WORST PIECE

Name your least useful piece and a realistic route. The f6 knight may need d7 or e8 to allow ...f5; the b8 knight may belong on c6, d7 or a6 depending on White's setup. The c8 bishop needs a job too.

4. OPPONENT'S BEST REPLY

After selecting a move, calculate White's strongest forcing answer. Do not test your plan only against cooperative moves. If a pawn break loses a piece to a pin, improve the position until the break works.

How this course fits your White repertoire

STUDY BOTH VIEWPOINTS

Your earlier 1.d4 course chose a Fianchetto system against the King's Indian. Booklet 14 here gives Black's response to that family. Compare what each side wants: a secure white king and central control versus active black central pressure.

KEEP SEPARATE NOTEBOOKS

Maintain one page for White's choices and one for Black's choices. A move you recommended as White may be a serious test for Black, without either recommendation being a forced win.

DO NOT CONFUSE THE INDIAN DEFENSES

The Queen's Indian normally uses ...e6 and ...b6. The Nimzo-Indian uses ...Bb4 against Nc3. A Grunfeld uses an early ...d5 challenge. This course centers on ...g6, ...Bg7 and ...d6, with explicit companion defenses when White avoids it.

DO NOT CONFUSE THE KING'S INDIAN ATTACK

The King's Indian Attack is a White setup. Similar piece arrangements with colors reversed can have different tempo counts and pawn structures. This course teaches the King's Indian Defense as Black.

Course directory

- 00 Start here and foundations**
- 01 Move orders and repertoire boundaries**
- 02 Classical gateway - meet White before the center closes**
- 03 Mar del Plata - the 9.Ne1 main line**
- 04 Bayonet Attack - meet 9.b4 with ...Nh5**
- 05 Other ninth moves in the closed Classical**
- 06 Exchange Variation - play the queenless middlegame**
- 07 Petrosian Variation - 7.d5 before castling**
- 08 Gligoric System - 7.Be3 before castling**
- 09 Samisch - the Panno main repertoire**
- 10 Samisch deviations - Bg5 and early pawn attacks**
- 11 Four Pawns Attack - strike with ...c5 and ...e6**
- 12 Averbakh - meet 6.Bg5 with a central break**
- 13 Makogonov and h3 systems**
